

AllTorque

Encoder

Continual Improvement

We are proud to introduce a new and better turns encoder. Modular design allows simple repairs of previously disposable parts. A double bearing housed shaft isolates load on the encoder sensor for long lasting performance and improved moisture barrier of the sensor housing. Style points because it's orange and proudly made in our facility.

High Resolution

-  500 Pulses per encoder rotation
-  Differentiates between forward and reverse
-  Delta turns precision
